

Stock Manager: User Manual

Version 1.0 | For small wholesale and retail shops

1. What this app does

Stock Manager keeps track of the products in your shop: what you have, what arrived, what you sold, and what is running low. It runs on one Windows PC and works without internet.

How stock is counted: the app does not keep a single "quantity" number. Every receipt, sale and adjustment is saved as a record, and the current stock is the total of all records. This means you can always trace where stock went.

2. Getting started

1. Run **StockManagerSetup.exe** and click Next until it finishes.
2. Open **Stock Manager** from the desktop icon.
3. Add your products (section 3).
4. Enter your opening stock using **Goods Receipt** (section 4) or **Adjust Stock** (section 6).

The main window is the **Products** screen. The buttons along the top open the other screens.

3. Products screen

This is your product catalogue, one row per item.

Field	Meaning
SKU *	Your own unique code for the item, for example RICE-5KG
Barcode	The number printed on the pack (optional)
Name *	Item name, for example Samba Rice 5kg
Category *	Currently only "General" is available
Unit	pcs, kg, bag, and so on

Field	Meaning
Cost price	What you pay the supplier
Retail price	Price for normal customers
Wholesale price	Price for bulk buyers
Reorder level	The stock quantity at which the item counts as low

* required

Buttons

- **New:** clears the form to add a new item
- **Save:** saves a new item, or saves changes to the selected item
- **Remove:** hides an item you no longer sell. Its history is kept.

Tips

- Click any row in the list to edit it.
- Use the search box to find items by name, SKU or barcode.
- The **Stock** column shows the current quantity. Rows turn **red** when stock is at or below the reorder level.
- Two items cannot share the same SKU.

4. Goods Receipt (new stock arrives)

Use this when you receive goods from a supplier.

1. Click **Goods Receipt**.
2. Choose the product.
3. Enter the quantity received and the unit cost.
4. Enter the supplier invoice number in **Reference** (optional but recommended).
5. Click **Receive stock**.

Current stock goes up immediately, and the product's cost price is updated to the latest cost you entered. The table below shows the 20 most recent receipts.

5. New Sale

1. Click **New Sale**.
2. Scan the barcode or type the SKU, then press **Enter**. The item is added to the cart.
3. To sell several of the same item, change **Qty** before pressing Enter.
4. Tick **Wholesale prices** to use wholesale prices for the whole cart.
5. Use **Remove selected** to take a line out of the cart.
6. Click **Complete sale**.

The app refuses to sell more than you have in stock. Each completed sale gets a reference number starting with S-, and stock is reduced straight away.

Note: Version 1 does not print receipts.

6. Adjust Stock

Use this when the real count differs from the system: stock counts, damaged, expired, lost or found items.

1. Click **Adjust Stock** and choose the product.
2. The screen shows the system stock. Type the **actual counted quantity**.
3. Choose or type a **reason** (required).
4. Click **Save adjustment**.

The app records the difference (for example -3) and keeps the reason for later review.

7. Low Stock report

Click **Low Stock** to see every item at or below its reorder level, with the lowest stock first. Use it as your shopping list for the next supplier order.

8. Reports

Click **Reports**.

- **Stock valuation:** every item with its stock, cost and total value, plus the total value of your stock at cost.
- **Sales:** items sold between the **From** and **To** dates, with quantity, revenue and estimated profit.

- **Export to CSV:** saves the current tab as a file that opens in Excel.

Estimated profit uses each product's current cost price, so it is approximate if your costs change over time.

9. Backups

Your data is stored on this PC. Protect it.

- The app makes **an automatic backup the first time it starts each day**.
- Click **Backup now** at any time to make one manually.
- Backups are saved in **Documents\StockManagerBackups** as stock-YYYYMMDD.db.
The latest 30 are kept.

Very important: copy the StockManagerBackups folder to a USB drive or a cloud folder (Google Drive, OneDrive) at least once a week. A backup on the same PC does not help if the PC fails.

Restoring a backup (manual): close the app, copy the backup file you want, and place it as **stock.db** in the folder %LOCALAPPDATA%\StockManager, replacing the existing file. Then start the app. Ask your developer for help if unsure.

10. Updating the app

Run the new installer over the old version. Your data is kept, because it is stored separately from the program.

11. What is included in Version 1.0

- Product catalogue with search, barcode and SKU
- Retail and wholesale prices
- Goods receipt (stock in) with invoice reference
- Sales with barcode entry, stock check and wholesale option
- Stock adjustments with reasons
- Low stock highlighting and report
- Stock valuation and sales reports with CSV export
- Automatic daily backup and manual backup
- Installer for a single Windows PC

12. Known limits in Version 1.0

- One PC only (no sharing between computers)
- No user login or roles; everyone has full access
- No printed receipts or invoices
- Only one category ("General"); no screen to add or edit categories
- No supplier list screen
- No way to cancel or return a completed sale (use **Adjust Stock** to correct it, with a reason)
- No one-click restore from backup

13. Planned for next releases

These are plans and may change.

Version 1.1

- Add and edit categories and suppliers
- Printable sale receipts
- Sale returns and cancellations
- Restore from backup inside the app

Version 1.2

- User login with roles (owner, cashier, storekeeper)
- Purchase orders to suppliers
- Reports for slow-moving items and daily sales summary

Later

- Several PCs sharing the same data
- Barcode label printing
- Check stock from a phone
